

Installation of Settings File for Acrobat Distiller 6

1. **Download** the zip file to a safe place on your computer (like the Acrobat program folder) and **decompress** it (double clicking the file will usually launch your decompression software).
2. Launch Adobe Acrobat Distiller 6.
3. Once Distiller has finished loading you need to load the settings. Go to the **Settings** menu and select "**Add Adobe PDF Settings...**".
4. In the Add Adobe PDF Settings window navigate to the folder into which you saved the settings file and double click on that file. This should return you to the main Acrobat Distiller Window.
5. In the Acrobat Distiller window click on the "**Default Settings**" drop down menu and select "WOWP_ver010407d8.joboptions". If you don't see the .joboptions file please make sure that you decompressed it (step 1). This completes the setup. Just make sure to use these "Default Settings" each time you create files for us.

Creating PDFs From PS & EPS Files

1. You can either drag the postscript/eps files into the Distiller window or choose Open from the File menu and select the desired file(s).
2. As Distiller processes the PostScript file(s) you will see a status bar progress across the window. Once Distiller says "**Ready**" again you should find a PDF file in the same folder as the original PostScript or EPS file(s).
